## **DETAILED ACTION**

### ***Response to Amendment***

The Examiner acknowledges the receipt of the Applicant's amendment filed on 06/30/2009. Claims 1-28 have been canceled. Claims 29-40 have been added. **Claims 29-40** are therefore currently pending in the present application.

### ***Allowable Subject Matter***

Claims 29-40 are allowed.

The following is an examiner's statement of reasons for allowance:

Consider claim 29, the best prior art found during the examination of the present application Sawyer (PCT/WO01/69864 A2), fails to specifically tech, suggest or disclose a method of protecting an apparatus from radiofrequency interference in a predetermined radio-frequency band, comprising, at a policing terminal:

detecting the presence of a radio terminal operable to generate interference in the predetermined radio-frequency band and in accordance with a first predetermined signaling protocol, wherein the signaling protocol specifies operation of a wireless local area network in which the network comprises a plurality of terminals, and wherein the protocol requires that the operation of the terminals is either as a slave station or as a master station;

transmitting a first signal in accordance with the first predetermined signaling protocol;

wherein, in response to the transmission of the first signal, the radio terminal is inhibited as a source of interference;

Art Unit: 2618

and wherein if the radio terminal forms part of an existing network, the first signal is such that:

the policing terminal mimics a slave station of the existing network by transmitting a response to inquiry messages from the master station, so as to join the existing network;

the policing terminal transmits a signal to swap the master/slave roles;

and the policing terminal, acting as master station, transmits a disconnect message to each of the slave stations.

Sawyer teach a detecting device 20 further comprises means, usually software executed by the processor 24. Said software orders the antenna part 22 to send regular INQUIRY messages and to listen or the Responses. All Bluetooth equipment within range is easily detected and data about them are logged. Software could also possess the means to establish a connection with the Responding device and transmit a request to switch off all Bluetooth communication capabilities (page 6 lines 14-21). The complementary steps to the method further comprise the step of setting up a connection with the equipment that sent Responses, requiring them to disable their Bluetooth connection capabilities (page 6 lines 25-28).

These teachings differ from the claimed invention, therefore claim 29 is novel and non-obvious and therefore allowed. Claims 30 depends upon allowable claim 29, therefore claim 30 is also allowed.

Independent claims 31, 33, 35, 37, 38, 39, and 40 and their respective dependent claims recite similar limitations as allowable claim 29, therefore, claims 31-40 are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

Art Unit: 2618

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
